## **II. Assessment Task Description/ Directions**

This assessment will evaluate your ability to assess and analyze specific child/ family health and nutrition information with the health, safety and nutrition policies and procedures of a classroom or program/ school/ center. You will use this information and your analysis to inform the design and implementation of recommendations you will make.

#### Part 1: Environmental "Scavenger" Hunt

Through your clinical site or other licensed child care facility, arrange a date and time to visit to complete your environmental Health & Safety Checklist (see below).

Before your observation:

 Locate and study the licensing standards for day care centers (e.g. in 2019, and in Illinois, this would be Subpart G: Health and Hygiene from the Illinois Department of Children and Family Services (2010, December 15), *Licensing standards for day care centers*. Available from <a href="http://www.state.il.us/dcfs/docs/407.pdf">http://www.state.il.us/dcfs/docs/407.pdf</a>) If not there, please search for the most recent version.

During your observation:

- Complete the Health & Safety Checklist and the Menu Review Checklist provided below, collecting evidence as available (pictures, if allowed, sketches, examples, menus, documents, etc.)

#### Post-Environmental Assessment Reflection:

- Summarize the results of your completed Health and Safety Checklist. This summary should include the following:
  - An overview of program practices related to:
    - Maintaining regulations, standards, and guidelines for indoor and outdoor environments, food preparation, and handling
    - Emergency medical and first aid procedures
    - Instructions and required documentation for administration of different medicines and approved medical treatments
    - State and local regulations for meal preparation
    - Maintaining a healthy, safe and risk-free environment
    - Record keeping
    - Reporting child abuse and neglect
  - How children and staff are supported in practicing safe and healthy behaviors through daily routines and activities
    - A description of how the environment you observed compares to licensing standards provided through the Department of Children and Family Services (as noted above to review)
  - What additional information would have been beneficial for you to make a full assessment of health and safety factors within the program you observed?

#### **Part 2: Recommendations**

Based on data collected and suggestions above, make specific recommendations for each of the following, highlighting key areas of supporting health, nutrition, and safety for young children:

- Children

- Sample statement that outlines how you would help children understand healthy habits?
- Sample statement that outlines how you would help children understand personal safety?
- Families
  - Sample statement for new parents or parents considering this center that outlines your vision and commitment to keeping children healthy and safe
- Classroom Staff
  - 3 daily procedures in the classroom that promote or strengthen health, safety and nutrition
  - 1 weekly procedure in the classroom that promotes or strengthens health, safety and nutrition
  - 1 monthly procedure in the classroom that promotes or strengthens health, safety and nutrition
  - 1 annual procedure in the classroom that promotes or strengthens health, safety and nutrition

#### Part 3: Community/ Professional Resources

Develop a physical portfolio (this can be a file, notebook, or electronic tool such as a wiki, original website, or live binder) to collect and organize community and professional resource information you could reference and continue to grow with regarding health, safety, and nutrition resources. The binder should have a minimum of 25 resources and be organized in an easily searchable, useable, editable way, such as:

- Health Information
- Safety Information
- Nutrition Information
